

Why nobody can find The Cowork Hub

You have the highest-rated coworking space on the Johar Town map — a perfect 5.0 across 87 reviews, better than COLABS, Venture Drive, Ignition and everyone else in the radius. And you are the ninth result. This report explains exactly why, with the evidence, and what to do about it.

AUDITED 1 Sep 2026 PAGES CRAWLED 6 of 6 COMPETITORS 14 in radius METHOD Live crawl, rendered DOM, SERP + Maps

BASELINE SCORE

Critically impaired

Five of your six pages return an HTTP 404 to Google. Your homepage ships zero server-rendered content. You have no structured data. Your only real asset — an outstanding Google Business Profile — is doing all the work alone.

34
OUT OF 100

01 — BASELINE

Where the 66 points went

Weighted across six categories. Every deduction below is tied to a specific piece of evidence in section 02 — nothing here is a hunch.

Crawlability & indexation	5 / 25
WEIGHT 25	
On-page & content depth	6 / 20
WEIGHT 20	
Structured data	0 / 10
WEIGHT 10	
Local SEO & Google profile	14 / 20

Citations & off-page	2 / 15
WEIGHT 15	
Speed, UX & conversion	7 / 10
WEIGHT 10	

THE ONE-SENTENCE DIAGNOSIS

Your business is excellent, your Google profile is excellent, and your website is functionally

invisible — so Google has no way to connect the reputation you have earned to the search terms your customers actually type.

02 — FINDINGS

What is actually broken

Ordered by revenue impact, not by effort. Fixing #1 and #2 alone is worth more than everything below them combined.

01 Five of your six pages return HTTP 404 CRITICAL

Only `/` resolves. Every other route — Spaces & Plans, Amenities, Community, About, Contact — returns Vercel's 404: `NOT_FOUND` when opened directly. Navigation works *inside* the site because React swaps the view client-side, so the fault is invisible to you while browsing. But Googlebot, Bing, WhatsApp link previews, and anyone who pastes a link into a chat all hit the raw URL. They all get a 404.

```
GET https://thecowork.pk/about → 404 NOT_FOUND
GET https://thecowork.pk/spaces → 404 NOT_FOUND
GET https://thecowork.pk/contact → 404 NOT_FOUND
GET https://thecowork.pk/amenities → 404 NOT_FOUND
GET https://thecowork.pk/community → 404 NOT_FOUND
title on all five: "404: NOT_FOUND" id: sin1:wdxm7-...
```

Compounding damage: your `sitemap.xml` submits all five of these dead URLs to Google. You are actively telling Google to crawl pages that 404 — a strong negative quality signal for a small site.

FIX

A single SPA rewrite rule (`vercel.json` → `rewrite /(.*) to /index.html`) resolves it in one deploy. The proper fix is #2.

02 The site ships no server-rendered content at all CRITICAL

The HTML delivered by your server contains a `<head>` and an empty root `<div>`. Every word of copy, every heading, every link is painted by JavaScript after load. Google *can* render JavaScript, but it does so in a deferred second pass that is rationed by crawl budget — and a brand-new domain with no authority sits at the bottom of that queue. Bing, DuckDuckGo, Facebook's and WhatsApp's link scrapers, and the AI crawlers that increasingly drive discovery render nothing.

```
Raw HTML response, thecowork.pk/
→ head: title, description, og:*, canonical (present)
→ body: EMPTY SHELL — no server-rendered content

Rendered DOM after JS: 180 words, 1 × h1, 4 × img
```

FIX

Migrate the React app to a pre-rendered or static-generated build (Vite SSG, or move to Next.js static export). Both fully solve #1 as a side effect. This is the single highest-value engineering change on the list.

03 Zero structured data on a local business site CRITICAL

There is not one `application/ld+json` block anywhere on the site. For a physical, location-based business this is the cheapest high-leverage fix in SEO. Schema is how you tell Google, in machine-readable terms, that you are a coworking space at a specific latitude and longitude, open specific hours, at specific prices, with a specific star rating. Without it Google has to guess — and it guesses in favour of competitors who spell it out.

```
document.querySelectorAll('script[type="application/ld+json"]').length
→ 0
```

FIX

Add LocalBusiness (with geo, openingHoursSpecification, priceRange, sameAs), Organization, BreadcrumbList, FAQPage, and Product/Offer per plan. I will write all of these when you share the codebase.

04 180 words on the homepage, against 2,800–3,500 for every competitor CRITICAL

Your entire crawlable site is one page of 180 words. WorkPod's Johar Town page runs ~3,500 words with a seven-question FAQ. Comence's runs ~2,800 with five named testimonials and full pricing. COLABS publishes a complete rate card. There is no amount of technical fixing that overcomes a 20× content deficit — Google has nothing to match a query against.

thecowork.pk/	180 words	0 FAQs	no pricing
workpod.pk (JT)	~3,500 words	7 FAQs	no pricing
comence.io (JT)	~2,800 words	6 FAQs	full rate card
colabs.pk (JT)	~3,500 words	0 FAQs	full rate card

FIX

Rebuild each of the five pages to 900–1,500 words of genuinely useful copy, and add the missing pages in section 05.

05 You publish no prices — every competitor does MAJOR

"Coworking space price Lahore", "hot desk rate Lahore", "private office rent Johar Town" are among the highest-intent queries in this market, and you cannot rank for a single one because the number does not exist on your site. Worse, it is a conversion leak: a visitor comparing you against Venture Drive (PKR 10,999/month published) or Comence (PKR 23,000 published) has to fill out a WhatsApp form just to learn whether you are in their budget. Most will not.

Published monthly desk rates in the radius		
Venture Drive	PKR 10,999	(+ PKR 1,000 day pass)
Comence	PKR 23,000	
COLABS	PKR 32,000 hot / 35,000 dedicated	
COWO	PKR 20,000 hot / 30,000 dedicated	
The Cowork	— not published —	

FIX

A real /pricing page with a rate table per plan and per shift, marked up with Offer schema. Even "from PKR X" beats silence.

06 Your best differentiator is nowhere in your SEO MAJOR

Your contact form offers a **night shift, 6:00 PM – 3:00 AM**. That is a serious commercial wedge in Lahore — thousands of freelancers and small agencies work US and UK client hours, and almost none of your competitors market to them explicitly. Yet the phrase "night shift" appears nowhere in a title, a heading, a meta description, or a page. You are sitting on an uncontested keyword cluster and not bidding on it.

Occurrences of "night shift" in crawlable HTML: 0
Occurrences in <title> / <h1> / meta description: 0
Competitors in radius marketing a night shift: effectively none

FIX

A dedicated page targeting night shift coworking space Lahore, 24/7 coworking space Lahore, coworking space for US timings Lahore. Low competition, high intent, yours to take.

07 Your Google profile name breaks Google's own naming rules MAJOR

The profile is listed as The Cowork – Coworking Space Johar Town Lahore. Google's guidelines require the business name to be the real-world name only; appended keywords are a

suspension-eligible violation, and any competitor can file a name edit against it. Right now it is probably helping you rank — which is exactly why it is fragile. One successful edit request and you lose that lift overnight, with no site content to fall back on.

FIX

Don't touch it until the website can carry relevance on its own (findings 1-4). Then normalise the name and let the site hold the keyword. Sequencing matters here.

08 Three different brand names across three properties MAJOR

NAP consistency — identical Name, Address, Phone everywhere — is a core local ranking signal. Yours diverges three ways, so Google cannot confidently merge the signals into one entity.

```
Website → "The Cowork Hub"
Google → "The Cowork - Coworking Space Johar Town Lahore"
Facebook → facebook.com/ShareSpacepk ("The Cowork")
Hours → site says reception 9AM-8PM; Google says Open 24 hours
```

FIX

Pick one legal name, one address string, one phone number. Publish it identically on the site footer, in schema, on Google, and on every directory. Reconcile the hours conflict — contradictory hours actively suppress local rankings.

09 Essentially no citations anywhere on the web MAJOR

Local "prominence" — the third pillar of Maps ranking after relevance and distance — is built from mentions across the web. Searches for your brand return your Facebook page and nothing else. You are absent from every directory and every listicle that ranks for your target terms, while competitors appear across all of them.

```
Absent from: coworker.com · office-hub.com · coworkingers.com
            instantoffices.com · hq.com · spacesworks.com
            b2c.com.pk · blogpakistan.pk · cubebell.com
            kickstart.pk "Top 14" · workpod.pk "12 Best"
            launchboxpk.com · primecoworking.io · vsubletspaces.com
```

FIX

The listicle route is the fastest win available to you. Most of these publishers add spaces on request or for a nominal fee, and every one of them outranks your own site today for your primary keyword.

10 Homepage H1 drops your primary keyword MINOR

Your title tag is well written — Coworking Space in Johar Town Lahore | The Cowork Hub at 52 characters is close to ideal. But the H1 renders as "Premium Coworking in Lahore", losing "Johar Town", "space", and "office" entirely. The heading tree below it is generic: "Curated for Excellence", "Designed for Focus". Beautiful copy, zero keyword surface.

```
h1 Premium Coworking in Lahore
h2 Curated for Excellence
h3 Freelancers / Startups / Enterprise Teams
h2 Designed for Focus
```

FIX

H1 → "Coworking Space in Johar Town, Lahore". Keep the beautiful line as the visible sub-headline. You lose nothing visually.

11 Image and asset hygiene MINOR

Alt text is present on all four images — genuinely good, and rarer than it should be. Three smaller issues: the hero is a 1264×848 file stretched into a 1406×968 box (visibly soft on large screens and a needless LCP cost); no image declares width/height, risking layout shift; and one image uses a relative path (Images/WomanWorking.webp, no leading slash) which will break the moment it appears on a nested route.

FIX
Serve the hero at 2× the display width, add explicit dimensions, add loading="lazy" below the fold, and make every asset path absolute.

12 **What is already right** KEEP

Worth stating plainly, because it means the foundations do not need rebuilding: HTTPS is enforced, www correctly 301s to the apex domain, robots.txt is clean and points at the sitemap, the canonical tag is correct, Open Graph and Twitter cards are complete, the viewport is set, there is exactly one H1, alt text is complete, and the site is genuinely fast (first contentful paint under 1 second, full load 1.8s, 7 resources). The design is also better than most of your competitors' — the problem is that almost nobody gets to see it.

You are rated best and ranked ninth

Live Google Maps results for coworking space Johar Town Lahore, in returned order. Google ranks the local pack on three factors: **relevance** (does the profile and site match the query), **distance** (from the searcher or the query's centroid), and **prominence** (how well-known the business is across the web). You are strong on none of them — and the ratings column shows how little that has to do with how good you actually are.

#	BUSINESS	RATING	REVIEWS	LOCATION	WEB PRESENCE
1	COLABS — Johar Town	4.6	190	22-N, Phase 2	Multi-city site, full rate card, ~3.5k words
2	Co. For Good	4.7	88	4A R Block Rd	Own site
3	GroWork	4.8	61	70-R1 Main Blvd	Own site
4	TecHub Pakistan	4.6	332	585, H3	Own site, very high review volume
5	Venture Drive — Johar Town	4.3	341	384-E, Ali Center	Ranks organically, 3 branches, price leader
6	Growth Coworking Space	4.6	104	37	Own site
7	Ignition Coworking	4.6	170	24-K Service Rd	Ranks organically, 2 branches
8	WorkX	4.8	98	336, G3 Main Blvd	Own site
9	The Cowork Hub — you	5.0	87	95 College Rd, PCSIR Colony	1 indexable page, 180 words, no schema
10	Flock Coworking	4.5	124	599 Q	No website listed
11	The Space Co-Working	5.0	25	G4, Phase 2	Own site
—	Comence — Johar Town	4.3	287	Johar Town	Ranks page 1 organically, ~2.8k words, 5 testimonials
—	WorkPod	—	—	Block B1, PGECHS	Strongest content SEO in the radius
—	Think Spot	5.0	79	Johar Town area	Own site

THE UNCOMFORTABLE GEOGRAPHY

Your address is 95 College Road, PCSIR Staff Colony — adjacent to Johar Town, not inside it. COLABS sits at 22-N and Venture Drive at 384-E, both squarely within the Johar Town polygon. For the query "Johar Town" you will always carry a distance penalty against them. The strategic

For the query **Johar Town** you will always carry a distance penalty against them. The strategic answer is not to fight harder for that one phrase; it is to **own the terms where you are the closest business on the map** — PCSIR, Wapda Town, College Road, Canal Road, near UET — while building the prominence to compete for Johar Town on merit.

SWOT on the five that matter

Fourteen coworking spaces sit within roughly five kilometres of you. These five are the ones actually taking search traffic you should be getting.

COLABS — Johar Town 22-N PHASE 2 · COLABS.PK 4.6 ★ · 190 reviews · #1 in the pack	
STRENGTHS - Highest domain authority in the market — multi-city brand with a Wikipedia entry and startup-press coverage - Fully published rate card down to hourly boardroom and rooftop pricing - Dedicated per-location landing pages, ~3,500 words each - Premium amenity set: auditorium, valet parking, private reception	WEAKNESSES - Most expensive in the radius — PKR 32,000-35,000/desk vs Venture Drive's 10,999 4.6 rating is a full 0.4 below yours - No FAQ content and no testimonials on the location page - Corporate, impersonal tone; poor fit for solo freelancers
OPPORTUNITIES AGAINST THEM - Beat them on rating in every snippet — 5.0 vs 4.6 is visible in the pack - Undercut on price and say so publicly - Own night-shift and US-timing demand, which they do not serve - Target "COLABS alternative Lahore" and "affordable coworking Johar Town"	THREATS THEY POSE - Brand authority means they win any generic "coworking Lahore" query by default - Budget to expand into your immediate area - Enterprise deals lock in 30-100 seat tenants for years

Venture Drive — Johar Town 384-E ALI CENTER · VENTUREDRIIVE.PK 4.3 ★ · 341 reviews · price leader	
STRENGTHS 341 reviews — nearly 4x your volume, the single strongest prominence signal in the radius - Aggressive pricing: PKR 10,999/month shared, PKR 1,000/day - Homepage title and H1 both target "coworking space Johar Town" exactly; ranks organically today - Three Lahore branches — Johar Town, Model Town, PIA Road	WEAKNESSES 4.3 is the joint-lowest rating among serious players — volume is masking satisfaction problems - Only two thin testimonials; no FAQ; shallow content overall - Budget positioning caps the quality of the environment they can offer
OPPORTUNITIES AGAINST THEM - Read their 1- and 2-star reviews and turn each complaint into a page section — this is the highest-yield research you can do this week - Compete on quality, not price: 5.0 vs 4.3 is a story you can tell honestly - Their content depth is beatable within a month	THREATS THEY POSE - Price anchoring — prospects arrive expecting PKR 11k - Review velocity keeps compounding their prominence lead - Closer to the Johar Town centroid than you are

WorkPod BLOCK B1 PGECHS · WORKPOD.PK Strongest content SEO in the radius	
---	--

STRENGTHS • A ~3,500-word Johar Town landing page with a seven-question FAQ — textbook local SEO • Publishes their own "12 Best Coworking Spaces in Lahore" listicle, capturing comparison traffic and controlling the narrative • Exact-match title: "Best Coworking Space in Johar Town Lahore"	WEAKNESSES • No Google Business Profile visible in the local pack — all organic, no map presence • No published pricing • No testimonials or review social proof • Content is generic filler ("Why Do You Need a Coworking Space in 2026?") rather than specific to the space
OPPORTUNITIES AGAINST THEM • You can beat them in the map pack immediately — they barely compete there • Ask to be added to their "12 Best" listicle; it ranks and it is a free citation • Write genuinely specific content and outrank filler on quality signals	THREATS THEY POSE • They own the organic result for your exact primary keyword • Their listicle shapes which spaces prospects even consider

Comence — Johar Town COMENCE.IO	4.3 ★ · 287 reviews · page-1 organic
STRENGTHS • Five named client testimonials with company names — the strongest social proof on any competitor page • Six-question FAQ answering real objections: cancellation, trials, guest policy • Mid-market pricing published from PKR 23,000 • Multi-location network with Wapda Town coverage — directly adjacent to you	WEAKNESSES • No street address on the location page — a real local SEO error you should not copy • 4.3 rating despite high review volume • Generic international-template feel; little sense of place
OPPORTUNITIES AGAINST THEM • Their FAQ set is a ready-made blueprint — answer the same six questions better and add pricing • Publish your full address prominently; you win the proximity signal they are throwing away • Collect two or three named testimonials from your existing members — you have 87 happy reviewers to ask	THREATS THEY POSE • Expanding into Wapda Town puts them on your doorstep • Well-funded content operation across multiple location pages

Ignition Coworking 24-K SERVICE RD, JOHAR TOWN · IGNITION.PK	4.6 ★ · 170 reviews
STRENGTHS • Ranks for the branded and generic "coworking space Lahore" term • 165 seats — scale lets them absorb large teams • Strong amenity list including gaming zone, prayer room, video-call rooms • Two branches: Johar Town and Bahria Orchard	WEAKNESSES • No pricing published anywhere • No testimonials, no reviews surfaced on site • Thin, dated page copy with weak heading structure • Homepage H1 targets "Lahore" generically, not the neighbourhood
OPPORTUNITIES AGAINST THEM • Their site is the easiest to outrank on-page of the five, once yours is crawlable • They serve no night-shift audience • Beat them on rating: 5.0 vs 4.6	THREATS THEY POSE • Established domain age and steady review accumulation • Capacity to win the team and SME deals you would also want

PATTERN ACROSS ALL FIVE
Not one competitor in this radius combines all four of: a 4.7+ rating, published pricing, real

FAQ content, and named testimonials. Every one of them is missing at least two. Your 5.0 rating is the hardest of those four to earn and you already have it – the other three are a few weeks of work. There is a genuinely winnable position here.

The keyword map

Four tiers, ordered by how quickly you can realistically win them. Do not start at the top.

TIER	TARGET TERMS	WHERE IT LIVES	DIFFICULTY
Own it now	coworking space wapda town lahore coworking space pcsir society coworking space college road lahore coworking space near uet lahore	New neighbourhood landing pages – one per area, genuinely distinct copy	Low – you are the closest business on the map for these
Uncontested wedge	night shift coworking space lahore 24/7 coworking space lahore coworking space for us timings lahore overnight office space lahore	A dedicated night-shift page + a homepage section	Low – essentially no competitor targets this
High intent	coworking space price lahore private office for rent johar town dedicated desk lahore rate meeting room rent johar town virtual office lahore	A real pricing page, plus one page per plan type	Medium – needs published rates and Offer schema
The prize	coworking space johar town lahore coworking space lahore shared office space lahore best coworking space lahore	Homepage + main Spaces page, backed by everything above	High – realistic at month 4-6, not before

Pages the site needs and does not have

- **/pricing** – full rate card by plan and shift, with Offer schema. The single biggest conversion fix.
- **/night-shift-coworking-lahore** – your wedge. Nobody else is bidding.
- **/private-office-lahore**, **/dedicated-desk-lahore**, **/hot-desk-lahore** – one page per plan, each targeting its own commercial query.
- **/meeting-rooms-lahore** – hourly bookings are high-margin and a low-friction first touch that converts into memberships.
- **/coworking-space-wapda-town** and **/coworking-space-pcsir** – neighbourhood pages where you win on distance. Write them genuinely differently; near-duplicate location pages get filtered.
- **/blog** – four posts a month aimed at Lahore freelancers. This is how you eventually earn links instead of buying them.
- **/faq** or FAQ blocks per page – with FAQPage schema, these win rich results and answer-box placements.

Ninety days, in order

Stop the bleeding

WEEK 1 — DO NOT DO ANYTHING ELSE FIRST

1. **Fix the 404s.** Add the SPA rewrite so all five routes return 200. One deploy.
2. **Add pre-rendering.** Static-generate the routes so the HTML contains real content. This is the change everything else depends on.
3. **Ship the schema.** LocalBusiness, Organization, BreadcrumbList across the site.
4. **Regenerate the sitemap** with fresh lastmod dates — yours still says 9 May 2026 — and resubmit in Search Console.
5. **Set up Google Search Console and Analytics** if they are not already running. You currently have no measurement at all, which is why this report had to be built from the outside.

Give Google something to rank

WEEKS 2–4

1. **Rewrite all five existing pages** to 900–1,500 words each, with keyword-bearing H1s and real FAQ blocks.
2. **Publish the pricing page.** Rates, per plan, per shift, in public.
3. **Build the night-shift page.** Your uncontested wedge.
4. **Reconcile NAP everywhere** — one name, one address, one phone, one set of hours, on the site, in schema, on Google, on Facebook.
5. **Fill out the Google profile properly:** add secondary categories (office space rental agency, business centre, virtual office rental), add every Service and Product with prices, seed 10–15 Q&A entries yourself, and start posting weekly. Your last post was May.

Build prominence

WEEKS 5–8

1. **Get listed on every directory** you are missing: Coworker, Office-Hub, Coworkingers, Instant Offices, HQ, b2c.com.pk, and the Pakistani listing sites. Identical NAP on every one.
2. **Get into the listicles.** Kickstart's "Top 14", WorkPod's "12 Best", Cube Bell, Blog Pakistan, Launchbox, Prime Coworking. These already rank for your keyword — being in them is faster than outranking them.
3. **Ship the plan pages and neighbourhood pages** from section 05.
4. **Collect named testimonials.** You have 87 five-star reviewers; ask five of them for a sentence and a company name.
5. **Push review velocity.** A QR code at reception and a WhatsApp follow-up. Target 15–20 new reviews a month — you need volume to close the gap on Venture Drive's 341, and yours convert better because they are all five stars.

Compound it

WEEKS 9–13

1. **Start the blog** — four posts a month on Lahore freelancing, remote work, and startup topics.
2. **Local partnerships for real links:** universities near you (UET, PU), startup incubators, bootcamps, freelancer communities. Host one event a month and get a link from every organiser.
3. **Normalise the Google profile name** once the site can carry the keyword on its own — closing the compliance risk in finding #07.
4. **Re-audit against this same rubric** and measure the delta.

What I need from you

This report is the **before**. To produce the **after**, I need to make the changes rather than

describe them.

- **Share the codebase** — zip the project folder and attach it, or connect the folder from your computer. It looks like a React/Vite app on Vercel; I will confirm once I can see it.
- **Send your rate card** — monthly and daily rates for hot desk, dedicated desk, and private office, day shift and night shift, plus meeting room hourly rates. Without real numbers the pricing page cannot be built.
- **Name the competitor you most want to beat.** You flagged this but did not say who. If it is COLABS the strategy is quality-and-price positioning; if it is Venture Drive it is review velocity and content depth. The plans differ.
- **Confirm your real opening hours** — Google says 24 hours, your site says reception 9AM–8PM with a night shift to 3AM. These need to agree.

Once the code lands I will implement every fix in findings 01–11, re-score against this exact rubric, and publish the after-report with the delta.

Audit performed 1 September 2026 against the live site, its rendered DOM, robots.txt, sitemap.xml, live Google Search results and live Google Maps results for the Johar Town radius. Competitor content figures are drawn from their published location pages. Review counts and ratings are as displayed by Google Maps on the audit date and move over time. Scores use a fixed weighted rubric so the before and after are directly comparable.
